THE PITFALLS OF ALARM PANELS

Traditional alarm panel solutions fail to delivery security value to QSR businesses

Intrusion panel based security solutions are **failing** QSR businesses

- Solutions require **large investment** in up-front equipment
- Franchise operators spend $100,000+ annually on **false alarm dispatch fees**
- Organized criminals **bypass sensors** to steal safes and cash undetected
- **Managing and changing codes** with frequent employee turnover is impractical and expensive
- Delivery drivers and other **permitted late night visitors** are not accommodated well by panel based alarms
- Alarm events without video evidence leaves central stations and police responders to **fly blind**

THE OUTCOME

- Police response is **deprioritized** for unverified alarm events
- Police **stop responding** to stores with high false alarm history
- Restaurants **forget** or **choose not to arm** their panels to avoid unwanted phone calls and overnight interruptions
- Restaurants are left **largely unprotected** by expensive security incumbents

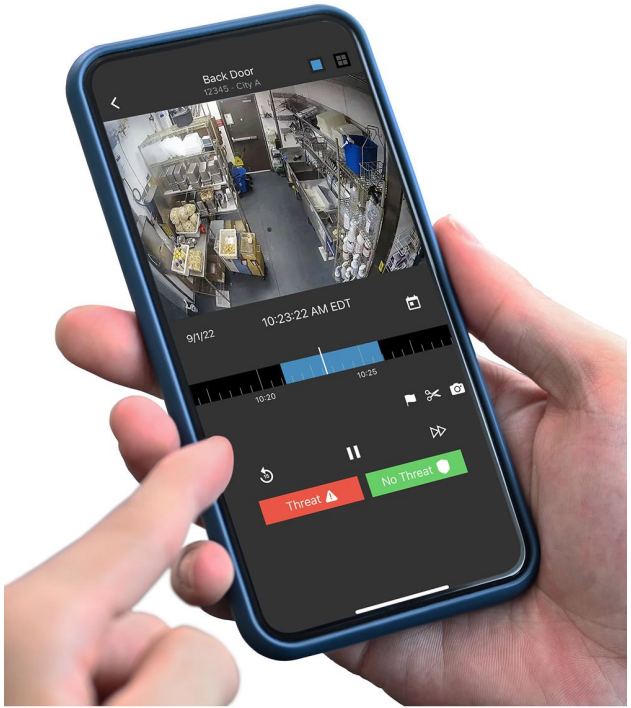
SMART SITE PROTECTION™

Our AI-driven intrusion detection software is disrupting an industry



Envysion capitalizes on AI-driven technology to detect potential after-hours threats, minimize disruptions, reduce false alarm fees, without the need for alarm panels

- Leverage our powerful security software to turn your existing on-site cameras into AI-enabled smart devices. No additional equipment is required.
- Cloud analytic technology analyzes motion-based video and filters out only the activity containing people, mitigating false alarms that plague similar motion-only video solutions
- System is armed based on site-level schedules of your choosing, with notifications enabled contact the right people for each location
- Envysion Professional Monitoring partners further filter out delivery drivers and other trivial events; to help your staff focus on true overnight threats

PANIC ALARM OVERVIEW

WHAT: A panic button is an **emergency contact device** that provides a quick and reliable way to signal for help in emergencies, enabling prompt action to be taken

WHO: Your employees, customers, a crucial tool for **enhancing the safety** and security of restaurant employees, retail operations and their patrons

WHY: Employee safety, customer safety, crime prevention, and regulations compliance

WIN: The only panic solution that gives dispatchers and agents the necessary **live video context** for incident review and swift emergency response

PANIC BUTTON DEVICE BENEFITS

KEY FEATURES

- Discrete design and operation - Call for help without escalation
- LTE cellular functionality - Easy installation, reliable connection
- Simple form and function - Fast, easy operation
- Versatile placement options - Buttons can be placed anywhere
- Simple testing and configuration - Verify operation & train teams
- Continuous monitoring - Ensure compliance & connection

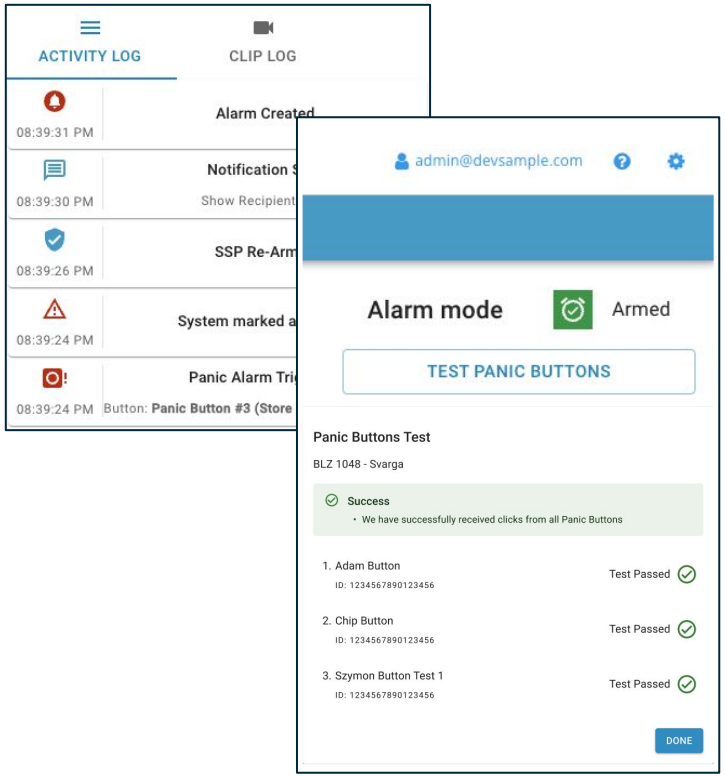
PANIC ALARM SOFTWARE BENEFITS



KEY FEATURES

- Panic Alarm event **logged** on site's **Alarm Summary** page
- Activity log shows **timestamp** of which button(s) was clicked
- **4-up live video** associated with each panic button
- **Heartbeats** make button maintenance & upkeep **easy**
- **Offline or low voltage status** automatically sends emails to site contacts
- Additional Test and Event-Only modes allow for easy installation and regular safety checks

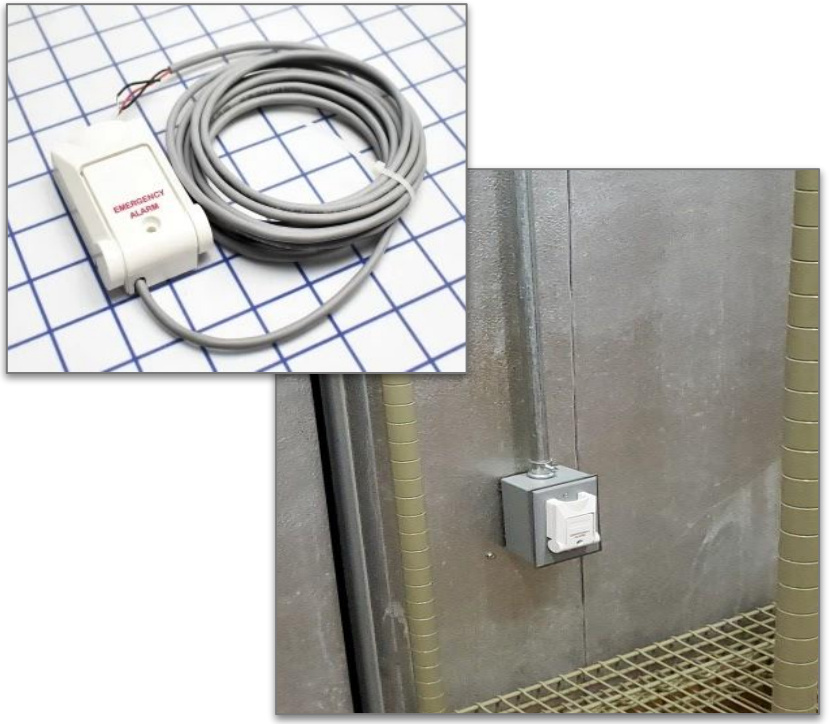
PANIC ALARM WALK-IN SWITCH

NEVER LOSE CONNECTION

- **PROBLEM:** Wireless connectivity is unreliable in freezers and coolers, meaning someone can get trapped inside without a way to call for help
- **SOLUTION:** The Panic Switch accessory supports a hardwired connection to a Panic Button with stable LTE connectivity
- **IMPLEMENTATION:** The Panic Switch is mounted inside the coolers, near the floor, and wiring is run to the button*



*Buttons must be placed in areas with LTE connectivity

PANIC BUTTON WORKFLOW

Button clicked

Panic alarm event created

SSP sends:

- Alarm
- Video clip
- Designated contact info

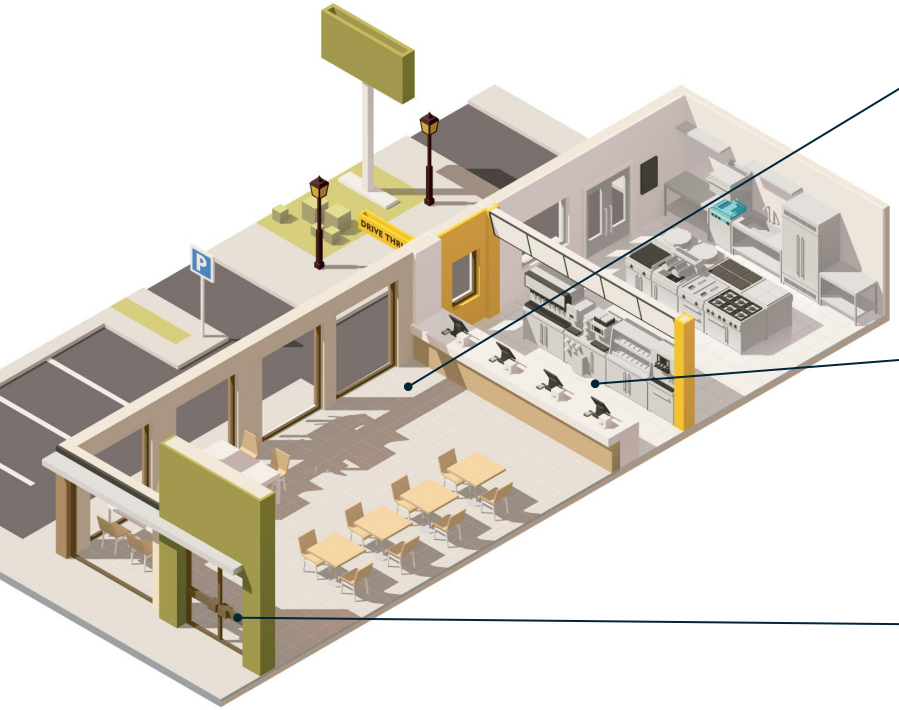
Monitoring agent calls 911 and stays in contact until emergency personnel arrive

Monitoring agent sends SMS message with link to video to your contacts

Monitoring professionals respond in **45s,** shortening the total response time, increasing arrest likelihood

ENVYSION IS SOLVING FOR SAFER

Envysion Security Powered by Smart Site Protection



AI intrusion detection

Detects people on camera intruding after hours and triggers video alarm workflow

Panic Alarm support

Immediately alert 9-1-1 centers (PSAP) with accompanying video regarding imminent danger.

Siren & Strobe Activation

POE connected sirens are automatically triggered by video alarm workflow to deter would-be thieves

Professional Video Alarm Monitoring

Video clips and live video is immediately sent to our central monitoring partners for verification, and when necessary contacting 9-1-1 centers (PSAP)

Schedule based activation

Flexible schedules, with additional features like exceptions and grace periods remove the need for alarm codes

Panel-free operation

Besides the instant savings, reduction of hardware reduces the potential for critical failures
